Technical Bulletin: 10/14

Product: Ryco Air Filters

Date: 24-3-14

Topic: Air Filter Design Change (republish)

No. of Pages: 1

PRODUCT DESIGN CHANGE: A1575

The filter design of A1575 has been changed from a plastic frame with a rubber seal to an integrated moulded frame/seal.

The original design had an external seal, the new improved version has the seal integrated in to the filter moulding (see illustrations below). This change has been instigated from customer feedback that the seal could come loose on the plastic frame during installation. The new design will eliminate the possibility of this inconvenience occurring.

The quality of the filters continues to match Genuine Performance in the three critical areas of Efficiency, Life and Flow. New design filters are in stock. This change does not affect fitment and all applications remain as before.
